

Catalina 445 App

Quick Start — set everything up at the dock

Set up every device while you still have wifi or cell signal. Offshore the app keeps working, but you can't create an account or add a new device without a connection.

1. Open the app

Open the app link in your browser. Tip: Share → **Add to Home Screen** so it opens like a real app.

2. Create your account

Tap **Create account**, choose a username and password (6+ characters). Your existing boat data loads automatically.

IMPORTANT — write down the **RECOVERY CODE** shown right after signup and keep it somewhere safe that is not only on the phone. It is the **only** way back in if you forget your password.

3. Turn on Face ID (optional)

Gear icon → **Face ID / fingerprint unlock** → **Turn on**. Then you can unlock with a glance instead of typing.

4. Set up other devices (before you leave)

On each phone or tablet, open the app and log in. Devices on the same boat share the same data.

5. Make a backup

Gear icon → **Download Full Backup (JSON)** and save it somewhere safe. Do this before big trips.

Everyday use

- **Ship's Stores / Provisions** — track what's aboard and build shopping lists.
- **Voyage Log** — start a voyage; tap the GPS button to fill lat/long or type them; edit the date/time to backdate an entry.
- **Maintenance** — record work done and plan future projects.
- **Ditch Bag** — your abandon-ship checklist.

Forgot your password? Login screen → Forgot password? → enter username + recovery code → set a new password.

It works offline. Changes sync to your other devices and the cloud automatically the next time you have signal.
