

Catalina 445 App

User Guide

Run your boat's inventory, voyages, maintenance, provisioning, and abandon-ship checklist — on deck or offshore.

Set up your account and every device while you have wifi or cell signal. Offshore the app works fully, but creating an account or adding a brand-new device needs a connection.

Getting started

The first time you open the app you create an account (username + password). This holds your boat's data and syncs it across your devices. For the best experience, use Share → Add to Home Screen.

Save your recovery code. Right after signup the app shows a one-time recovery code. Store it somewhere safe that isn't only on the phone — it's the only way to regain access if you forget your password.

Logging in & Face ID

After setup, opening the app asks for your password. Turn on Face ID / fingerprint unlock in the gear (Settings) menu to unlock with a glance; your data stays encrypted and your password always works as a fallback.

The five sections

- **Ship's Stores** — track everything aboard by compartment/locker; adjust quantities as you use them; label lockers.
- **Voyage Log** — start a voyage, log entries with position and conditions. Tap the GPS button to fill latitude/longitude, or type them. Date & time default to now — tap Edit to backdate a forgotten entry. Record COG/SOG/AWA/AWS and notes, and export a voyage to PDF.
- **Maintenance** — log work done (who, when, notes) and plan future projects with parts lists.
- **Provisions** — build lists by category, check off what you have, and generate shopping lists.
- **Ditch Bag** — your abandon-ship checklist and standard procedure.

Offline & syncing

Everything works offline. When you're back in range, changes sync automatically to your other devices and the cloud. All devices logged into the same boat share the same data.

Backups

- **Download Full Backup (JSON)** — a complete backup you can keep and re-import later. Do this before big trips.

- **Download Excel Backup** — a readable spreadsheet of your data.
- **Cloud Backups** — automatic timestamped snapshots you can restore from.

Security

- Your data is encrypted on each device with your password, so a lost or stolen phone doesn't expose it.
- In the cloud, your data can't be listed or discovered by others.
- Keep your recovery code somewhere safe and separate from the phone.

Troubleshooting

- **Forgot password** — Login screen → Forgot password? → username + recovery code → new password.
- **App didn't update** — reload normally (pull to refresh / reopen). Never use "Clear Website Data" — it erases local data.
- **Other device not syncing** — make sure both have signal and reload each.
- **Add a device** — do it with signal: open the app on the new device and log in.
